CATALOGUE 2024

Branded promotional clothing & workwear

MALFINI
A.S.

Dear Business Partners, Customers, and Friends,

With great pleasure, I welcome you to our new catalogue, featuring a wide range of promotional clothing and workwear. I am honoured to greet you on the 25th anniversary year of our company, and to introduce you our offer that aims at a single goal: to provide you with the highest quality, functionality, and stylish design across our entire portfolio.

Our team is here for you, ready to assist with tailored solutions that meet your needs. We're glad to guide you in selecting materials, cuts, and designs that best suit your unique requirements. We firmly believe that collaboration is the key to success, and thus, we place great importance on building long-term relationships based on mutual trust and joint growth.

I am confident that you will be thrilled by our extensive range of products and that you will find what meets your needs and those of your customers. Thank you for your trust and the partnership opportunity to achieve your goals.

Sincerely,

Radek Veselý
Chairman of the Board of Directors

WE'RE CELEBRATING OUR 25TH ANNIVERSARY!

Reaching a quarter-century in business marks a significant milestone that truly deserves recognition. Exactly 25 years ago, our company's foundation was laid, and we boldly embarked on an entrepreneurial journey. Two high school classmates originally planned to establish an advertising agency, but market demand reshaped their vision into producing and importing our own clothing. The initial batch of 32 thousand T-shirts from China was completely sold out within just 14 days. This pivotal moment led to the establishment of a Czech corporation bearing the iconic eagle emblem. Today, our wings spread across nearly 35 European countries.

25th
anniversary

As our distribution network expanded in the Czech Republic and neighbouring nations, we also ventured into the realm of e-commerce by launching an online shop as a new sales channel. We invested in warehouse space and enhanced our customer service offerings. The growing interest from our partners naturally aligned with an expansion in production, reaching out to various Asian destinations. Presently, we proudly celebrate a decade of serving customers in fifteen European countries. The surge in stock demands prompted the inauguration of a cutting-edge logistics centre in Ostrava. Within a mere four years, this facility had to make way for an even larger and more modern establishment, where the revolutionary AutoStore robotic technology is employed to manage our textile inventory.

Behind these remarkable achievements stand the people - our dedicated employees, valued business partners, and, above all, you, our cherished customers. Your unwavering trust and support remain integral to us. You serve as our main wellspring of inspiration and the driving force behind our ceaseless quest for improvement and the expansion of our offerings. Your invaluable feedback propels us to discover novel ways to deliver top-notch products and services meticulously tailored to meet your exact requirements. The path we tread is substantiated by many prestigious accolades, including a notable second place in the National Corporate Social Responsibility Awards, accompanied by a coveted three-year international "Committed to Sustainability" certification.

This anniversary marks an opportune moment to establish fresh goals and strategic plans to propel us forward. United with you, we're resolutely committed to fostering innovation, sustainable product and service development, and the steadfast reinforcement of MALFINI's standing in the market. In this direction, we draw out the blueprint for our ongoing growth and the enduring triumph of our company.

LOGISTICS OF THE FUTURE

Enhanced Warehouse Performance, Expedited Picking, Space Optimization, Flexibility, Energy Efficiency, and a Highly Proficient Workforce – these are just a few of the benefits brought forth by the newly implemented AutoStore Robotic Warehousing and Picking Technology at our state-of-the-art logistics and distribution centre in Ostrava.

MALFINI'S OSTRAVA LOGISTICS HUB

Efficient warehousing and distribution logistics serve as the linchpin for the triumph of any company engaged in the production and sale of various goods. Success hinges on meticulous orchestration, a principle underscored by our own experience at MALFINI.

Throughout a quarter-century of dedicated business operations, we have progressively expanded our warehousing capacity to a current expanse of 20,000 square meters. With strategic investments in cutting-edge warehousing and picking technologies, we've automated processes to the point of full robotization – all while upholding our commitment to sustainability and minimizing our carbon footprint. These strides have unlocked new avenues for swift responsiveness, heightened precision in order fulfilment, and flawless product handling.

The newly introduced AutoStore system, works in harmony with our existing Kardex and Vertiflex stackers, features state-of-the-art technology and software algorithms. These innovations facilitate precise item identification, handling, and arrangement, significantly mitigating the potential for errors and losses. Spanning an impressive 2,650 square meters, this facility can accommodate up to 100,000 plastic containers – an equivalent cargo volume of approximately 100 trucks. Notably, the upgraded system allows for the storage of up to one-fifth more products.

This expansion aptly addresses the company's capacity requirements and dramatically curtails the time required for order preparation and the dispatch of goods.

RESPONSIBILITY IS EMBEDDED IN OUR DNA

Responsibility is integral to our corporate values and deeply ingrained in our business culture. We ensure that all our products are manufactured in adherence to the highest international standards of social, ethical, and environmental practices.

We firmly believe in the possibility of a more sustainable fashion industry and are dedicated to consistently enhancing our operations, monitoring, and minimizing our business's impact.

We operate with transparency and openness.

In today's world, an increasing number of customers are deeply concerned about the production processes and their consequences for our planet, particularly in the realm of textiles, where production continues to escalate annually. Just like our customers, we greatly value responsible international partnerships, especially those aligned with MALFINI's sustainable approach.

We appreciate partners who champion innovation in production within the circular economy framework. Equally important to us are the social aspects of responsible business and environmental safeguarding. We highly regard our suppliers, especially those with international WRAP and BSCI certifications within the Amfori cluster. These certifications guarantee compliance with legal, humane, and ethical production standards.

Maintaining accountability across the entire production process is of paramount importance to us. Our relationships with suppliers are built on respect, fairness, parity, and long-term sustainability principles. We honour and uphold mutual agreements and conventions.

We take pride in our manufacturing presence in Bangladesh, China, India, and Turkey.

Caring for People is Our Priority.

Our concern extends beyond MALFINI employees. We collaborate closely with our partner factories and manufacturers in Asia to enhance working conditions. We are committed to supporting local communities long-term, particularly in our collaboration with the ADRA Foundation to aid children from Dhaka's slums through the Chalantika Education Centre. We firmly believe that education is the path to a brighter future.

Meticulous Material Selection is Our Standard.

We are discerning in our choice of materials as we prioritize product quality. The material is a defining factor in product quality, influencing a garment's lifespan and recyclability. All our products are crafted in alignment with the most stringent criteria and undergo multiple stages of inspection. Within each production territory, a vigilant team of quality controllers oversees both the production process and the well-being of factory employees.

Alleviating Our Environmental Footprint.

We are acutely aware of our environmental responsibility and are resolute in our efforts to reduce CO₂ emissions. Our commitment is evident in our unique hybrid photovoltaic system with battery storage integrated into our office building and logistics centre. We actively mitigate the negative environmental impact of vehicular traffic, minimize waste generation, and offer sustainable packaging. Our attainment of the prestigious EFQM international social responsibility certificate, "Committed to Sustainability," underscores our dedication to this cause.

We are proud members of the Textile Exchange.

FOR A BETTER FUTURE

For a long time, we have been supporting the education of children from the slums in Dhaka, Bangladesh, in the Chalantika educational center.

CRAFTED TO PERFECTION

In the previous year, we embarked on a journey with the Journey line of shirts, an aptly named collection that brought together the expertise of MALFINI and the renowned tailor, Roman Humlíček. This collaboration birthed an exclusive collection of shirts catering to both men and women.

Roman Humlíček, a skilled artisan with 16 years of experience at the Czech clothing company Blažek, has since established his atelier, where he crafts for clientele from both domestic and international fronts. Within these creative confines, the very first model of the unique Tailored collection was imagined, revolutionizing the perception of fashion in promotional clothing. By seamlessly blending time-honoured craftsmanship with cutting-edge technology, we have produced a garment that epitomizes impeccable fit, exceptional quality, and meticulous attention to detail.

You are a prominent Czech tailor crafting for both local and international clientele. Have you previously collaborated with companies within the promotional clothing sector? What has motivated you to partner with us?

- My introduction to MALFINI occurred even before our formal collaboration. The company made a lasting impression on me, and I established strong connections with several individuals. When the proposition arose to expand the MALFINI Premium® brand's portfolio to include men's and women's shirts, my decision was immediate. I embraced this opportunity as an invigorating challenge that I eagerly embraced. Shirts have long been a central theme in my work.

How do you perceive the concept of design?

- To me, design, particularly in the realm of product design, represents a delicate equilibrium between aesthetics and functionality - two essential elements that shape every object influenced by human hands. Additionally, apparel design bears unique characteristics. It involves the interplay of material, typically fabrics that inherently lack a rigid form, and the wearer who imparts the garment with its contour and expression.

What prompted your pursuit of tailoring?

- I must emphasize that it was tailoring that chose me, rather than the other way around. I come from a lineage where this craft is a cherished legacy passed down through successive generations. From my early years, I immersed myself in my grandfather's sewing atelier, and my aspiration to become a tailor akin to him was unwavering.

Who do you regard as your professional role model?

- It is challenging if asked to identify a singular role model. Numerous individuals within the industry have profoundly influenced my journey, individuals I've encountered through familial ties, academic pursuits, internships, and international professional endeavours. I've been privileged to encounter inspirational figures at every juncture, each providing valuable lessons and insights.

We want to thank Roman Humlíček for the interview. We have complete confidence that you, our valued customers, will find the same satisfaction in our JOURNEY premium shirts that we do.

BRANDS SHOWCASING OUR PRODUCTS

Within MALFINI's extensive portfolio, you'll always find the perfect attire for work, sports, or social gatherings. Explore various colours, diverse cuts, and comfortable fabrics, including selections crafted from organic cotton and recycled materials.

However, it's not just the name that sets us apart. MALFINI Premium® is tailored to those who appreciate exclusive materials and refined craftsmanship. Our clothing, which is made from fine merino wool and carefully chosen SUPIMA® cotton, exemplifies this by offering an exceptionally high level of softness and smoothness. Intricate cuts are also a standard feature for us. The latest addition to this exceptional collection are the JOURNEY shirts, designed by the renowned Czech tailor Roman Humlíček.

For vibrant colours and effortless branding, look no further than Piccolio®. Take your pick from an extensive palette of hues. With tear-off labels, you can easily create your own collection of T-shirts.

The RIMECK® brand skillfully combines the exacting demands of workwear with contemporary fashion trends. As a result, our products not only endure workplace challenges but also ensures a remarkable appearance. We uphold four fundamental principles with each offering - striking design, meticulous craftsmanship, premium materials, and your safety.

LET US CREATE THE PERFECT PRODUCT IN ONE PLACE!

Dress your employees in corporate attire and get an unmistakable identity for your company, or create stylish and original clothes for friends or family.

THE TEXTILE SELECTION

Consider for what purpose the textile is intended to serve.

1

SELECTION OF CUSTOMIZATION TECHNOLOGY

We will be pleased to advise you on the technology that matches your needs.

LABEL CHANGE

We will make and sew the label with your logo.

3

PACKING BY ONE PIECE

Improve the entire impression of your brand with one-piece packaging.

YOUR BRAND CLOTHING

5

Do you need a complete order including textile evaluation? We will provide you with the most suitable evaluation technology quickly and in perfect quality.

The combination of high-quality materials and top-quality printing and embroidery machines guarantees a final product that not only looks good, but also lasts!

From transfer to embroidery. Maybe even with your own label.

THE DIGITAL WORLD OF MALFINI

Simplify your promotion, easily create your own e-shop.

MARKETING SUPPORT IN ONE PLACE.

Interested in having your own e-shop but not sure where to start? No problem, it's easy with us! Thanks to our services, you can have your own e-shop in no time.

TAKE ADVANTAGE OF ONE OF THESE OPTIONS:

B2B Rest API - the most advanced and best solution, automatically connected directly to our system, allows for automatic order processing,

XML Feed - an automated data file supported by almost all current systems and e-shop constructors, very easy to implement,

CSV File - one-time data export, quick and easy implementation, requires manual updates for any changes.

MALFINI DOWNLOAD CENTRE

Simplify the promotion of products. Easily, quickly, and without limits. The Malfini Download Center provides online access to all marketing materials such as product photos, image photos, videos, POS, product cards, certificates, and PPC banners.

ONLINE CATALOGUE

Create your own web presentation with our products in just a few minutes! Your own e-shop with the ability to receive inquiries from your customers using the Online catalog tool.

INTERACTIVE CATALOGUE

Don't need a paper catalog but want to browse? Check out our interactive catalogs with links to the e-shop and corporate website. Get the most up-to-date information.

SAMPLE PACK

Do you need samples? Create your own mix of products up to 4 times a year with a 25% discount.

Combine products from promotional textiles with RIMECK® workwear.

REAL PRODUCTS FOR REAL PEOPLE

MALFINI® always has the right outfit for various occasions, from casual attire to sportswear and clothing for social gatherings with friends. You can choose from a wide range of colours and styles, including products made from organic cotton or recycled materials. High-quality and comfortable materials ensure comfort and satisfaction when wearing them.

T-SHIRTS

T-shirts are an integral part of our everyday life. They have evolved over time into an art and personal expression phenomenon from the original practical workwear purpose. A canvas for expressing creativity, opinions, or interests.

RE-VOLUTION COLLECTION WITH GRS CERTIFICATION

Let's focus on what we buy and use. One of the best ways to contribute to protecting the planet is to select products made from recycled materials. These products help reduce waste in our environment and conserve natural resources that would otherwise be used to produce new materials.

Recycled materials are the future of the fashion industry. We have only one planet. By supporting recycled products now, we can collectively shape our future.

Each of us can contribute to safeguarding the planet, and even small changes can have a significant impact.

ORGANIC COLLECTION WITH GOTS CERTIFICATION

Behind every product that bears the Global Organic Textile Standard label lie the strictest regulations, from cultivation to production.

The globally respected GOTS certification guarantees organic and ethical production and quality throughout the supply chain.

Everything must be free from chemicals. Only natural methods are utilised, and no artificial fertilisers, pesticides, or insecticides. At the same time ensuring safe working conditions for all employees, from cotton harvesting to clothing production.

Thanks to this certification, you can be sure that we wear clothes produced on the principles of ecology and ethics.

ELASTANE

Fine and strong polyurethane fiber. The key feature is its high elasticity, as elastane can be stretched out from three up to seven times of its original length - without breaking. It is always used in combination with other fibers to ensure dimensional stability, increase elasticity and reduce the wrinkling of the final fabric.

RECYCLED POLYESTER

The fibers are made by recycling consumer plastics (PET bottles, plastic packages and other waste material). The advantage is the consumption of less energy during production and they leave a lower carbon footprint.

FLEECE

Fleece is a contemporary fabric with outstanding thermal insulation properties. It is becoming increasingly popular for sports and outdoor activities. Recycled PET bottles are frequently used in its production, which positively impacts the environment.

RECYCLED POLYESTER

The fibers are made by recycling consumer plastics (PET bottles, plastic packages and other waste material). The advantage is the consumption of less energy during production and they leave a lower carbon footprint.

ANTIPELLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric's pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

NANOTEX®
RESIST

NANOTEX RESIST

Certified fabric which has been fundamentally transformed through nanotechnology. The resulting fabric repels liquids, thus extending the lifetime of the jacket and helping it retain the natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

- lightweight windproof fabric · full-length coil zipper · hidden hood in the collar
- hood and bottom hem adjustable by elastic drawstring · welt pockets · folds into separate small bag for easy carry

ACTIVE

We are all active in different ways. Some of us go for a run, others practice yoga, and some of us hike in the mountains. However, one thing we have in common is clothing made from quick-drying and breathable materials.

BAMBOO PRODUCTS

You can find bamboo terry products - towels
- on page 173 in the MALFINI Premium® section.

IN EACH DETAIL

The name MALFINI Premium® itself indicates that the range is designed for those who prefer exclusive materials and elegant craftsmanship. In this line, we use only the finest materials, such as SUPIMA® cotton and premium merino wool, resulting in exceptional softness and smoothness of the products. Each garment has a sophisticated cut and details that make it unique. In this collection, you will find the special JOURNEY shirts designed for us by the leading Czech tailor, Roman Humlíček.

MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother shinier and softer. Merceration results in higher strength and better color stability of the material.

PERFECTION PLAIN 251, 253

MERINO

Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers. The reason for these qualities is the size of an individual fiber – and merino wool fibers are very fine, thinner than 18 microns.

As such, it is used in every area of fashion from haute couture robes to highly functional garments. This natural wool is sheered from the Merino breed of sheep, kept in natural environment (open field), with most of the production comes from Australia, New Zealand and Argentina. Because sheep don't stop growing wool, they need to be sheered every year. Not only is wool a renewable resource, it is also biologically degradable – after you throw it out, it will decompose and provide soil with nutrients.

HOW TO TAKE CARE OF IT

You can use washing machine up to 40°C temperature, making maintenance easy. Of course, we recommend washing inside out and with similar colours. To preserve the shape, avoid drying in direct sunlight and heat, and iron using only steam at medium temperature. If your merino clothing catches a slight odor, just airing it properly should be enough to remove it.

MERINO RISE 157, 158

BAMBOO FIBER

Fiber made of bamboo based on regenerated cellulose. It has thermoregulatory, antibacterial, antimycotic and antistatic properties. Bamboo fiber is stronger along with three times higher absorbency than cotton, resistant to frequent washing and keeps its properties for a long time. We do not recommend using fabric softener in order not to reduce absorbency of the material.

BAMBOO TOWEL 951, 952

Towel · Bath Towel

RIMECK®

WORKWEAR MADE REAL

The RIMECK® brand effectively melds the rigorous demands of workwear with the latest fashion trends. Our products not only look great but also withstand the rigours of everyday wear. Each piece must satisfy four critical criteria - striking design, meticulous craftsmanship, top-quality materials, and a primary focus on your safety. Rest assured, we are committed to this principle.

VERTEX

LUXURY COLLECTION BY RIMECK®

The VERTEX collection combines technologically advanced fibers, comfort and an outdoor look. Workwear can thus be highly durable, flexible and stylish at the same time!

CERTIFICATION - W07, W08, W09

EN ISO 13688:2013/A:2021 - Protective Plaining - this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, wearout, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

EN 14404:2004+A1:2010 - Personal protective equipment - Knee pads for kneeling work - The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

WATER RESISTANT TREATMENT (W55, W56)

The waterproof TPU membrane resists moisture penetration very well while maintaining the flexibility of the entire material. Water column 10 000 mm.

BREATHABLE MATERIAL (W55, W56)

The 3-layer material helps to regulate water vapour, reliably moving it away from the body and creating a feeling of comfort. Breathability of 4,000 g/m²/24 hours.

THERMAL REFLECTIVE ZONE (W55, W56)

Thermo reflective zone on the back.

ANTI-SOILING FINISH (W07, W08, W09)

The ability of the top material to repel liquid, dirt and greasy dirt.

CORDURA (W07, W08, W09)

The use of CORDURA® material makes the trousers even more resistant, especially against punctures or tearing.

PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

RESIST R01, R02

T-shirt men's · women's

JACKET 501, 504

Fleece men's · women's
S-4XL · XS-2XL

Fleece, 100 % polyester, antipilling finish, 280 g/m²

- insulating fabric · full-length molded zipper · pockets with molded zipper · bottom hem adjustable by elastic drawstring
- sleeve hems with elastic band · women's – slight fit cut

4XL size available in colours 01, 02, 05, 23, 94

EFFECT 530

Fleece unisex
S-3XL

Fleece, 100 % polyester, antipilling finish; complementary material: plain weave, 100 % polyamide, 360 g/m²

- highly insulating fabric · shoulders and elbows covered by a waterproof, abrasion-resistant fabric
- full-length molded zipper · pockets with molded zipper
- sleeves ended by cuffs · bottom hem adjustable by elastic drawstring

JACKET HI-Q 506

Fleece unisex
S-3XL

Fleece, 100 % polyester, antipilling finish, Complementary material: Rip Stop, 100 % polyamide, inner PU coating, 360 g/m²

- highly insulating fabric · shoulders covered by a waterproof, abrasion-resistant fabric · full-length molded zipper
- pockets with molded zipper · bottom hem with elastic band · sleeve hems adjustable by velcro

CASUAL 550

Softshell jacket men's
S-3XL

Knitted softshell: 100 % polyester; micro fleece - 100 % polyester
Softshell: 96 % polyester, 4 % elastane; micro fleece - 100 % polyester, Lining: 100 % polyester, 350 g/m²

- 2-layer softshell · combination of knitted and plain fabric · full-length reverse coil zipper
- sleeve hems adjustable by velcro · pockets with reverse coil zipper · 2 inner pockets · contrast elements

RIP STOP

Very strong, regularly repeating weave. In this smooth fabric, thick warp and weft threads are interwoven in intervals of 5-8 mm. The surface gets an effect of a grided structure. This apparent grid significantly increases the fabric's resistance to ripping and tearing.

NEXT 518

Fleece vest unisex
XS-4XL

Fleece, 100 % polyester, antipilling finish, 280 g/m²

- insulating fabric · full-length coil zipper
- welt pockets with coil zipper · bottom hem adjustable by elastic drawstring

CERTIFICATION

of RIMECK work clothes

Selected garments from the collection HIGH VISIBILITY (HV) Rimeck correspond to the international standards, which determine the optimal form of protective Plaining with high visibility. Certified garments from the HV collection are supplied with a leaflet providing information on proper storage, treatment and purpose.

EN ISO 20471:2013 – High visibility Plaining – this international standard specifies requirements for Plaining with high visibility, which is able to visually indicate the presence of a user for vehicles or other mechanized means of transport under any light conditions, both in daylight and when illuminated by headlights of vehicles at night.

High visibility Plaining are made of fluorescent material, and in combination with reflective stripes are divided into three categories:

 **Category 3** – the highest level of protection – the minimum required substrate surface is 0.80 m² and 0.20 m² of retroreflective material.

 **Category 2** – the medium level of protection – the minimum required substrate surface is 0.50 m² and 0.13 m² of retroreflective material.

 **Category 1** – the minimum level of protection – the minimum required substrate surface 0.14 m² and 0.10 m² of retroreflective material.

EN 1150:1999 – Protective Plaining – caution Plaining with high visibility for non-professional use – standard specifies requirements for optical properties of caution high visibility Plaining suitable for adults or teenagers, not for professionals. The garments are designed for visual indication of the presence of users in all light conditions, both in daylight in urban lighting and when illuminated by headlights of vehicles at night.

EN 343:2003+A1:2007 – Protective clothes – Rain protection – European standard determining the properties of fabrics and seams of a protective garment. The characteristics of these are measured for the outside of the clothes. After achieving the specific permeability requirements and reaching the appropriate certification, it provides protection against water penetration and resistance against steam penetration for the wearer.

EN ISO EN ISO 13688:2013/A1:2021 – Protective Plaining – this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, aging, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

EN 14404:2004+A1:2010 – Personal protective equipment – Knee pads for kneeling work – The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

TYPE 2 – foam plastic or other filling material in trouser pockets, or permanently attached to trousers.

 **LEVEL 0** – only suitable for use on a flat surface – does not protect against punctures

 **LEVEL 1** – suitable for use on flat or uneven surfaces – protection against puncture with a force of at least 100 ± 5 N

 **LEVEL 2** – suitable for use on flat or uneven surfaces in demanding conditions – protection against puncture with a force of at least 250 ± 10 N

MATERIALS

fabric and finishes

NATURAL MATERIALS

COTTON

The most popular natural material in the fashion industry. Cotton is characterized by properties such as softness, pliability, strength, absorbency and breathability. It is pleasant to the touch and resists higher temperatures. It is often used in combination with synthetic materials or elastane.

ORGANIC COTTON

Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes. The biggest producers are Turkey, India, the USA and China.

BAMBOO FIBER

Fiber made of bamboo based on regenerated cellulose. It has thermoregulatory, antibacterial, antimycotic and antistatic properties. Bamboo fiber is stronger along with three times higher absorbency than cotton, resistant to frequent washing and keeps its properties for a long time. We do not recommend using fabric softener in order not to reduce absorbency of the material.

MERINO WOOL

Active fiber that regulates body temperature changes and is one of the most breathable natural fibers. The fiber can absorb large amounts of moisture – along with odour molecules in the sweat. Natural elasticity maintains dimensional stability, and the fabric is easy to maintain.

VISCOSE

Fiber made based on regenerated cellulose. The input raw material for the production is wood or cotton pulp. Viscose is breathable and it has great absorption features. Compared to cotton, it is softer, shinier and finer.

SYNTHETIC MATERIALS

ELASTANE

Very fine, strong, elastic polyurethane fiber. The key feature is its high elasticity. Elastane can be stretched out from three up to seven times of its original length without breaking. It is always used in combination with other materials, ensures dimensional stability, increases elasticity and reduces material wrinkling. Elastane is prone to high temperatures.

POLYESTER

Synthetic fiber made by modification of the input material. The fiber is very strong so it can be made thick or very fine (micro polyester). Material is durable, quick-drying and easy-care. It is suitable for sports and physical activities. Through chemical and mechanical processes various modifications of the material properties can be achieved depending on the purpose of use (insulation, impregnation).

POLYAMIDE

The process of polyamide production is similar to the one of polyester. The material is durable, easy-care and has a good shape stability. It dries quickly thanks to low moisture absorption. It has twice the greater abrasion resistance than polyester. The fiber can be made thick or very fine as well as polyester. Mechanical and chemical treatment influences the final product's properties.

POLYPROPYLEN

Smooth and hard surface fibres have high abrasion resistance. They show good hydrophobic properties which, due to very low water sorption, preserve the strength and dimensional stability of the material even in damp environments. The final material is lightweight and shows good thermal insulation.

POLYETHYLEN

Currently the most widely used polymer in the world, characterized by high strength, friction resistance, zero moisture content and chemical resistance. Thanks to its properties it is ideal for the production of safety protective equipment protecting against mechanical influences and wear.

RECYCLED POLYESTER

The fibers are made by recycling consumer plastics (PET bottles, plastic packages and other waste material). The advantage is the consumption of less energy during production, they leave a lower carbon footprint and reduce environmental pollution. By recycling we achieve the same quality and properties as with ordinary polyester.

BRANDED MATERIALS

SUPIMA®

The brand represents the finest cotton of 1% worldwide production. This type of the US grown Pima cotton has over a hundred years' history. Its unique extra-long fibers are twice the strength of regular cotton. They are resistant to pulling, breaking and tearing which makes products made of it incredibly smooth, resistant, non-pilling and keeping their appearance for a long time.

NANOTEX RESIST

Certified fabric which has been fundamentally transformed through nanotechnology. The result fabric repels liquids, extends the lifetime, retains natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

SOFTSHELL

Softshell is a laminated textile for modern and sports plain weave and plain weave for outdoor activities. It is divided into membrane and non-membrane. Plain weave made from this material is light, warm, elastic and has high mechanical resistance. Softshell with a membrane can be waterproof and simultaneously air permeable.

CORDURA® CLASSIC

The CORDURA® fabric is made in accordance with approved standards of the company INVISTA. CORDURA® holds of stains, resists tears and abrasions like no other fibers. Its strength ensures high longevity. CORDURA® is a registered trademark of INVISTA for durable fabrics.

3M™ STRIPES

3M retroreflective stripes increase visibility of the person who wears the garment, thereby reduce possibility of accidents. 3M™ technology of reflective materials is based on a layer of microscopic glass spheres mounted on the substrate fabric layer with a mirror surface. On 1 cm² of the fabric there are up to 30,000 glass beads.

SEGMENTED STRIPES

Retroreflective stripes are used to improve visibility during night and bad optical conditions. They are designed for use on safety clothes, with flexibility in mind, preserving full range of motion. These stripes are thermally applied, and can handle washing very well.

BIONIC-FINISH® ECO

Environmentally friendly and highly durable hydrophobic textile finish based on proprietary technology that improves the functional properties of the fabric: repels impurities, it is breathable and better resists adverse weather conditions.

FABRICS

SINGLE JERSEY SLUB

Fine weft knitted fabric with characteristic structure of slub fabric. To achieve this final effect, a yarn with thicker and thinner sections is used throughout the length which are created by varying the tightness of the twist. This fabric is also characterized by its elasticity.

SINGLE JERSEY

Fine weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave features ductility, softness and easy unstitching. The quality of the final product depends on the thread used for making the fabric. Products are manufactured from high quality ring spun thread.

PIQUE

Weft knitted fabric patterned with geometrical relief on outside. On the reverse side it is enhanced with supplementary thread. This type of knitting is popular for production of polo shirts and plain weave ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

INTERLOCK PIQUE

Warp knitted fabric with a pattern in which two fully interlocking rows alternate with a one-face row. One side of the knitted fabric has twilled separate stitches while the other side is plain. This type of knitting is popular for production of polo shirts and plain weave ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

DOUBLE FACE INTERLOCK KNIT

Double face knitting also called double-sided. The wave is densely alternating front and back uprights on the outside and reverse material sides. In the unstretched position only front stitches are visible, reverse stitches are visible only while stretched. This knitted fabric looks identically from the back and it is highly elastic in the transverse direction.

GRID KNIT

Quick-drying, breathable knit for the production of modern, functional clothing. The special grid structure perfectly moves moisture away from the body and expands it onto the fabric surface for fast drying, making it feel fresh, dry but also cooling the body. High elasticity ensures maximum comfort during wear.

RIB KNIT

Double-sided knitted fabric consisting of rib pattern indicated by 1:1 or 2:2. This information determines the ratio of regularly alternating vertical stripes of stockinette stitch with vertical stripes of reverse stockinette stitch. Rib knit fabric is elastic and it is mostly used for collars, cuffs, plackets and hem of poloshirts and sweatshirts.

FRENCH TERRY – not brushed

Weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave is enhanced with supplementary thread that leads along the reverse side of the fabric. The supplementary thread increases strength, absorption as well as the volume of the fabric.

FRENCH TERRY – brushed

Weft knitted fabric with characteristic dendritic columns on the outside and brushed soft on the reverse side. Reverse side of the material enhanced with supplementary thread is fluffed by mechanical process. Such way treated surface has a larger volume and shows warmer properties.

STRETCH FLEECE

Smooth outside, brushed inside functional stretch knit fabric with great thermo isolating properties. It is soft, lightweight, breathable and quick-drying material. It is suitable for sports and physical activities. Inner part of the material has antipilling finish.

FLEECE

Weft knitted fabric characteristic with brushed dense teased soft surface on both sides of the material. It has outstanding insulating attributes, long lifetime and easy-care. Material can be treated with antipilling finish. Products are suitable for embroidery and laser engraving.

PLAIN WEAVE

Plain weave fabric is made of strong, regularly repeating weave that has the same appearance on the outside and reverse side. With its simple and dense interlacing, it creates a steady and smooth surface suitable for printing and embroidery. Plain weave fabrics are manufactured from high quality combed cotton or polyester.

POPLIN

Mostly used type of material for shirts production. It is extremely soft, pleasant to the touch, though stiff enough. It is made by a plain weave wave which has a higher amount of warp than weft threads.

MICRO TWILL

The use of two-fold composition yarn with high density 100/2 occurs a very petty threading. This creates a thin, but effective diagonal lines that gives the twill weave an elegant and modern look. It is a popular non - wrinkling fabric with high breathability and soft feeling.

OXFORD

Wave derived from canvas wave. The difference is that there are at least doubled yarns alternating when fabricating the fabric. Oxford is shinier than canvas. It has a wide range of use. It can be made from natural or synthetic yarns.

RIP STOP

Very strong regularly repeating wave. In this smooth fabric are interwoven thick warp and weft threads in the intervals of 5 - 8 mm. The surface gets an effect of a grided structure. This imaginary grid significantly increases the fabric rip and tear resistancy.

TWILL

Wave characteristic by diagonal spacing that is regularly repeated. It consists of alternating the system of warp and weft yarns. The fabric is very robust, tear-resistant and easy-care. The most common use of twill wave is in denim or workwear. The material is also popular for caps production. It can be smooth or brushed. The brush finishing makes the surface softer with matte appearance.

TERRY

Loop fabric consists of solid loops on both sides of the material. It is a three-dimensional fabric with very soft touch and excellent absorbent properties. It is ideal for towels and bath towels production in the material composition of 100% cotton or blend of bamboo fiber and cotton.

NONWOVEN FABRIC

Fabric produced without knitting or weaving. Input material is a polypropylene polymer melt. The result is a smooth, flat, porous fabric with a relatively high tensile strength and low abrasion and bending strength. The material is popular in the industry due to low acquisition costs and good filtration and insulation properties.

JACQUARD KNIT

Very interesting plastic patterns can be achieved using the jacquard technique in a combination of two colors. We call regular patterning, which has a different reverse side and the obverse side is made up of visible eyelets, "birdseye". Due to its strength and stability in shape, this pattern is suitable for use on cuffs or collars and at the same time underlines the high quality and luxury of the product.

FINISHES

PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother shinier and softer. Mercerization results in higher strength and better color stability of the material.

SILICONE FINISH

The silicone finish is similar to the effect of fabric softener, however longer lasting. It makes the product soft to the touch, more dirt-proof and the prints stick much better.

EASY CARE

The surface finish based on modification of the cotton fiber cellulose, which increases the flexibility of the material. It prevents the creases while wearing and washing cycles, thereby reducing wrinkling, easier ironing, shape stability and dimension stability.

ANTIPELLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric's pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

PU FINISH

A long-lasting polyurethane layer that is applied from one side of the base fabric. It provides water, moisture resistance, abrasion and dirt resistance. Due to the special composition, the layer is very flexible, lightweight and does not negatively affect the other properties of the product.

PA FINISH

Acrylic treatment is used to improve the mechanical and practical properties of the fabric. It is mainly used in outdoor clothing and is characterized by wind resistance and tensile strength.

TPU LAMINACE

Durable top layer made of thermoplastic polyurethane ensures stability of material properties in a wider range of conditions. The combination of the TPU membrane and the top material maintains the flexibility of the product and provides waterproof and abrasion resistant surface with excellent bend and tensile strength.

SILVER COATING

A special matte silver coating applied from the inside of the fabric improves the functional properties of the material. It increases water resistance, prevents transparency of the top material and increases resistance to damage potentially caused by washing.

ANTI-SOILING FINISH

The ability of the top material to repel liquid, dirt and greasy dirt, which you will appreciate especially in the work environment. Dirt or grease make the droplets on the treated fabric that can be easily wiped off, thereby extending the life of the product.

WATER REPELLENT FINISH

Special surface finish preventing the penetration of moisture and fabric absorbency, which improves its functional properties - water simply runs off the surface in the form of small drops.

LEGEND

NOVELTIES

- NEW PRODUCT**
For information about stock availability please contact our sales department.
- NEW COLOUR**
For information about stock availability please contact our sales department.

MATERIALS

- ELASTANE**
A synthetic fiber that contains polyurethane bonds of high elasticity.
- ORGANIC**
Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes.
- MERINO**
Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers.
- THREE-LAYERD SOFTSHELL**
Three-layerd softshell with membrane
- DOUBLE-LAYERD SOFTSHELL**
Double-layerd softshell
- RECYCLED POLYESTER**
The fibers are made by recycling consumer plastics.

TYPES OF LABELS

- TEAR OFF**
Tear off label.
- STICKER LABEL**
Label in a form of a sticker. Can be easily taken off.
- LABEL FREE**
The products have only a small size label behind the neck for easy rebranding

TYPES OF SEAMS

- FLAT SEAMS**
Double-sided cover stitch which is flat ensures maximum wearing comfort.
- TAPED SEAMS**
Technology supporting the waterproofness of material at seams. The waterproof tape is applied thermally under pressure over the inside seams.

MATERIAL PROPERTIES

- WINDPROOF**
Windproof material prevents wind and chills from penetration.
- WATERPROOF**
Rating in millimetres to indicate material's resistance to water pressure. The higher the water column is, the longer the fabric will remain waterproof.
- EXTRA DRY**
Extra dry material.
- BREATHABLE**
Rating in g/m² per 24hours. The ability of a fabric to allow moisture vapor in grams in square meter per day. The higher the value is, the better fabric breathes.
- COOL/WARM**
Soft, easy care, quick-drying and conductive fabric.
- THERMOREGULATION**
Keeps you warm when it's cold and reversed.
- ODOR RESISTENCE**
Thanks to moist absorption it keeps sweat out of your skin and therefore it's antibacterial. The clothing stays fresh longer.

MATERIAL FINISHES

- SILICONE FINISH**
The silicone finish is similar to the effect of fabric softner, however more lasting. It makes the product soft to the touch, more dirt-proof and the prints hold much better.
- ANTIPELLING FINISH**
The anti pilling finish lowers the pilling tendency of the fabric.
- ANTI-SOILING FINISH**
The ability of the top material to repel liquid, dirt and greasy dirt.
- WATER REPELLENT FINISH**
Special finish against the penetration of moisture and fabric absorbency.
- EASY CARE**
Surface finish eliminates fabric wrinkling to provide product easy care.

MULTIFUNCTION PRODUCTS

- 3 IN 1**
Multi use jacket can be worn as one whole winter jacket, or separately as a windbreaker and a fleece
- 4 IN 1**
Multi use Hi-Vis workwear jacket can be worn as one whole, upper and inner part separately, or just the upper jacket without sleeves as a vest
